

## M&B Frame Design

M&B frames for TEMS were designed as a less expensive alternative to the original TEMS frames. M&B frame is a more traditional tent frame system with "poles and connectors" rather than foldable arches with sophisticated hinged brackets found on the original design. All the "pole" components, such as rafters, purlins and uprights, are made of Ø1.9" (50 mm) aluminum tubing - same as the original TEMS frame.

M&B frame provides most of the advantages of the TEMS system that was developed for the military. Advantages include:

- Heavy duty design, strong and light
- Expandability, easily add sections
- Simple set up / take down procedure.
